Weekly Weather Forecast

Weekly Outlook - 27 September 2016

Temperature

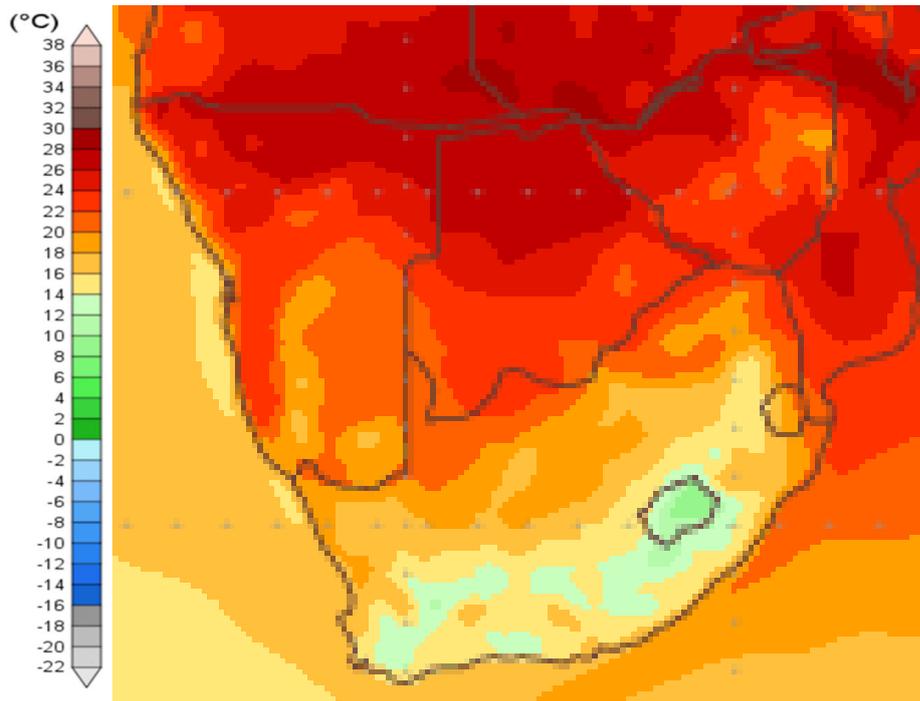

Figure 1: Mean surface temperature from Tuesday 27 September 2016 to Wednesday 5 October 2016

Mean temperatures for most parts of South Africa are expected to be between 14°C and 22°C for the period 27 September to 5 October 2016 while the northern regions of Limpopo can look forward to temperatures of than 22°C and higher.

In the Western Cape and Eastern Cape we can expect temperatures between 10 to 14°C.

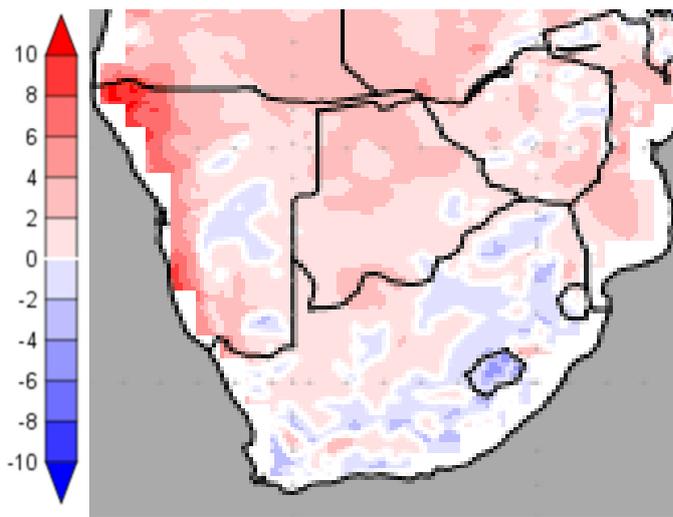

Figure 2: Temperature anomaly for Tuesday 27 September 2016 to Wednesday 5 October 2016

For the Northern Cape and the eastern Free State temperatures will be slightly higher than normal. It is expected that temperatures for most of South Africa will be cooler than normal as a result of the cold front that moved over the country last week. Temperatures over KwaZulu-Natal will be normal for this time of year.

Temperature forecasts from the **National Centers for Environmental Prediction**. Normal Temperature derived from CRU monthly climatology for 1901 – 2000

Rainfall

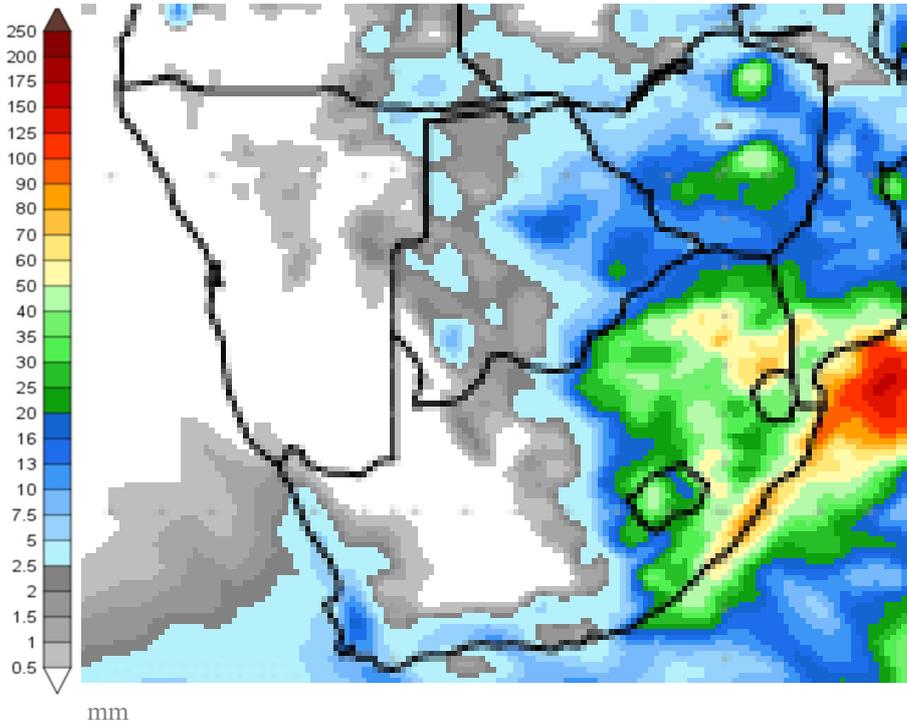

Figure 3: Precipitation for Tuesday 27 September 2016 to Wednesday 5 October 2016

Widespread rainfall is expected for most parts of the summer rainfall region for the coming week. Between 20 to 50 mm is expected for most areas with areas in Mpumalanga, Limpopo and along the KwaZulu-Natal coast that will receive up to 70 mm. Between 2 to 5 mm is expected along the west coast and southern coast of South Africa.

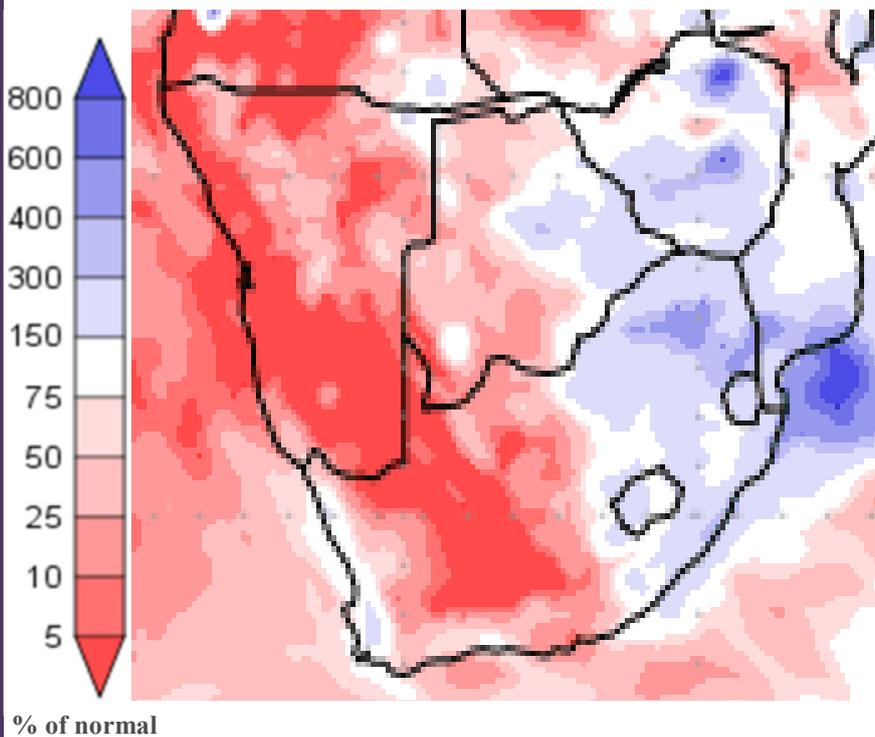

Figure 4: Precipitation (% of normal) for Tuesday 27 September 2016 to Wednesday 5 October 2016

Higher than normal rainfall is expected over most of the summer rainfall region for the coming week. The Northern Cape, Eastern Cape and southern Free State will remain dry. Normal to above normal rainfall is expected along the west coast and the western parts of the Western Cape.

Precipitation forecasts from the **National Centers for Environmental Prediction.**

Normal rainfall derived from CMAP monthly climatology for 1979 – 2003
